RESEARCH PROFILE

I am an experimental and computational immunologist with hands-on experience in Biacore SPR, competition ELISA, therapeutic candidate evaluation, and primary-cell functional assays. At PB Immune Therapeutics (2021–2025), I led preclinical humanized anti-CD40 candidate evaluation from panel screening through lead selection and non-human primate studies, coordinating external synthesis, assay specifications, raw-data review, and advancement decisions. In a co-first-author study, I quantified PDE4D isoform usage across 251,055 memory CD4+ T cells and tested the pathogenic state with short-isoform overexpression and selective PDE4D inhibition (*Nature Immunology*, in revision). I am also the lead author of *AI Drug Discovery: A Practical Guide for Biomedical Researchers* (PanmunEducation, Korea, Sep 2026). At the 2026 NVIDIA Agentic AI Hackathon, I developed an agentic AI platform for drug discovery and safety assessment, and our team was selected as a top five finalist. I would bring quantitative binding measurements, combined experimental and computational analysis, and synthesis-to-testing coordination to the Keating Lab's peptide design campaign.

CORE COMPETENCIES

- **Primary-cell functional and molecular assays.** Primary human T-cell isolation, expansion, activation, and suppression assays; short-isoform overexpression and selective pharmacological inhibitor validation (*Nature Immunology*, in revision); qRT-PCR, molecular cloning, Western blotting, and 10-color FACS.
- **AI-driven drug discovery and AI agent development.** Lead author of *AI Drug Discovery: A Practical Guide for Biomedical Researchers* (Sep 2026), covering structure prediction, molecular docking, binding-affinity scoring, and lead optimization; model development using PyTorch, RDKit, QSAR, ChemBERTa, GNN, AutoDock, and AlphaFold 3, and agentic AI development for drug discovery and safety using the NVIDIA BioNeMo platform (Top-5 at 2026 NVIDIA Agentic AI Hackathon).
- **Single-cell, spatial, and multi-omic profiling.** 10x Genomics single-cell workflows (scRNA-seq, scTCR-seq, Chromium Connect), GeoMx DSP, Olink targeted proteomics, and 24-marker flow cytometry.
- **Synthesis-to-testing coordination, animal models, mentoring, and grants.** External CRO synthesis/assay specification and raw-data QC, non-human primate and murine efficacy studies (Islets 2019; Xenotransplantation 2024), mentoring of 17 trainees, and lead proposal writer on four funded R&D grants (~$1.2M USD total).
